

Always the best and most up-to-date software for car lease and car rental

CarWise ICT is specialized in the development of software for car rental (RentWise), car lease and professional car fleet management (LeaseWise). Moreover, CarWise ICT offers you a complete package for your financial administration (AccountWise) that you can use independently but also in combination with RentWise and/or LeaseWise.

CarWise ICT has developed these packages on its own account and also supplies the necessary upgrades and updates.

LeaseWise & RentWise

CarWise ICT makes a clear distinction between software for lease (LeaseWise) and rental (RentWise). Not just because apart from similarities the lease and rental activities also have many dissimilarities but also because these activities can be performed independently from each other. For example, one entrepreneur focuses both on lease and rental and another actually specializes in one of these activities. That is why CarWise ICT has developed RentWise and LeaseWise as two independent, yet complementary, packages that can, even be considered as modules of each other.

LeaseWise and RentWise can also simply be linked to other packages of CarWise ICT, e.g., AccountWise and our own CRM system. There are also a number of external links to financial packages, such as Exact software, Unit 4 / Multivers, ADP EVA (DMS), ADP Autoline(DMS), DBS Finance (DMS), OEC (DMS) MegaCar(DMS), Darts(DMS), Fis2000, Carlo and Navision.

The products of CarWise ICT are characterized by their scalability, flexibility, stability, user-friendliness and well-organized presentation. They fully cover the automation need of car lease and rental companies, if combined with Microsoft® Office, to which extensive links are provided.

Cooperation as top priority

CarWise ICT stands for cooperation.

First of all, with you as our customer, and partners on the market, Autodisk (for the lease calculation and car data), and of course with the employees within our organization which consists of a decisive team of consultants, programmers and account managers. In this context, cooperation is a top priority which enables CarWise ICT to serve you as best it can.

Our consultants: your support

Our helpdesk employees are our consultants and that is exactly why we can optimally serve you. In case of questions or problems in the area of software, you do not get to speak with just any helpdesk employee, but with people who know exactly what is going on in the daily practice as they regularly visit companies, such as yours. They can always answer your questions quickly and adequately.

For that matter, this form of supply of services is an important source of information for CarWise ICT. Thanks to your questions, comments, and/or wishes, we are able to further develop within the software, to learn about the use by you as a customer, and to learn about the operational developments within the market.

Anticipate changes

CarWise ICT has its feet firmly on the ground. We follow all developments in the area of car lease and car rental or rather, we prefer to anticipate this, where possible. We inform you as soon as possible about possible consequences of changes in legislation or other changes and we adapt our software. In

*"The car rental companies affiliated with BOVAG make use of a national warning system, ELENA. In this way they inform each other about customers who earlier did not comply with a lease contract or who have outstanding fines."
Source: www.bovag.nl*

practice this means that before a change in legislation comes into effect, your company is already completely ready. But, we also quickly and thoroughly pick up other market developments. The centralization of invoicing and the planning of independently operating rental companies is a good example of this. CarWise ICT has developed the system (I-Wise) whereby large buyers can follow the deployment of rental cars nationwide in a centralized manner. Via the Back Office the where, which and why can be viewed. The Back Office also invoices in a centralized manner. Hence, also our smaller customers can compete with the large national rental companies.

Better than a manual

Software that is so user-friendly that an explanation or manual is not required at all simply does not exist. The software of CarWise ICT is no exception to this rule, but the way we present our explanation is. Instead of creating manuals per program component, CarWise ICT ensures that the procedures are available digitally and online. These procedures describe how subject matters are supported in the software and how these can be processed. The procedures are available as Microsoft Word documents via the internet and are also immediately ready for use as basis for or part of your internal procedure documentation.

Costs and mutual benefit

A monthly license contribution is charged for the software of CarWise ICT. As a consequence, the user does not become owner of the software, but this does prevent companies from making (very) significant investments in software packages that moreover quickly lose their value.

Consequently, we can also constantly continue developing and are able to continue using our market leadership to your advantage. This way you are always assured of the most up-to-date software for your activities in the area of car lease and car rental.
